Past version history
Version1.3 Rev.532 (only released in Japan)

Fixed: The bug that flushing was not executed properly and subsequent administration was not performed when Total Dead Volume was set to 59.650 µl or more using "Recovery Mode" was fixed.

Version1.3 Rev.531 (Only released Internationally)

Fixed: Fixed the bug that when using up to 10 steps in "Variable Flow Mode", the error message that appears when the dosing schedule exceeds the battery level is displayed on the monitoring screen even after the software automatically corrects the schedule.

Fixed a bug that concentration units of chemicals were not displayed correctly in the exported data file.

Fixed a bug that the refill date and time notation (yy/mm/dd) is displayed incorrectly as (dd/mm/yy) in the exported eta file.

Other changes:

The folder structure in the installation disk has been changed.

The installer was fixed while unifying the folders that were independent for each OS.

Primetech Corporation, Japan. September 10th. 2020.
